SKILLS

- **Languages:** Shell scripting, C++, C, Python
- **Frameworks:** HTML and CSS, NodeJS
- **Tools/Platforms:** MySQL, Git, GitHub, Gitlab, Linux, MongoDB, Kubernetes, Docker, Jenkins, Terraform, Grafana, Prometheus
- **Soft Skills:** Problem-Solver, Team work, Leadership, Quick Learner, Adaptability, Time management

PROJECTS

Mental Health Checkup Stimulator - [GitHub](#)

March 2026

- Implemented persistent data handling through file I/O techniques to manage 100+ patient records, producing organized mental health reports and improving overall code maintainability.
- Built a terminal-based mental health evaluation application in C++, modeling multiple assessment scenarios with layered symptom analysis and tailored wellness suggestions.
- Designed a structured object-oriented model with multiple interconnected classes handling patient details, questionnaires, and result processing, applying inheritance, encapsulation, and method overloading.

Deployment Rollback - [GitHub](#)

Jan 2026

- Built a deployment failure simulation system using Node.js that demonstrated version management, automated health checks, and rollback recovery, reducing recovery time from failure by 90% through one-command rollback automation
- Implemented version tracking, monitoring, and incident logging with automated health verification, enabling real-time detection of faulty deployments and 100% recovery to stable builds
- Designed a CI/CD-style deployment workflow simulating v1 (stable) → v2 (faulty) → automatic rollback, documenting full incident post-mortem and deployment history to model production-grade reliability practices

End to End DevOps Pipeline - [GitHub](#)

September 2025

- Engineered an automated CI/CD pipeline using Jenkins/GitLab CI and Docker, streamlining multiple build, test, and deployment stages and reducing manual effort by ~25–30%.
- Managed cloud infrastructure with Kubernetes and Infrastructure-as-Code tools (Terraform/Ansible) across 3 environments (dev/test/prod), enabling reliable deployment of several services with improved scalability.
- Enhanced system reliability by incorporating automated checks, monitoring of key operational metrics via Prometheus/Grafana, and security verifications to support quicker detection of issues.

TRAINING

CPP OOPS Training – [Cipher Schools India](#)

July 2025

- Mastered core Object-Oriented Programming concepts in C++ including encapsulation, inheritance, polymorphism, and abstraction with hands-on implementation of real-world applications.
- Developed proficiency in advanced C++ OOP techniques such as constructors/destructors, virtual functions, operator overloading, and multiple inheritance patterns for scalable code design.
- Built object-oriented applications using C++ demonstrating strong understanding of class hierarchies, access modifiers, and runtime polymorphism through practical coding projects.

CERTIFICATES

- Oracle Cloud Infrastructure 2025 Certified AI Foundation Associate – [Oracle University](#) December 2025
- Git and GitHub – [Cipher Schools](#) July 2025
- Microsoft Azure Fundamentals – [Microsoft Learnings](#) January 2025

Extra-Curricular Activities

- Volunteered with an NGO for one month, supporting community development through plantation drives, human rescue efforts, and Ganga ghat clean-up activities.
- Led my district team to victory in the Open National Basketball tournament at Major Dhyan Chand Stadium, Delhi. And with our trophy-winning moment got the opportunity to featured on the Indian Sports Association's official page.

EDUCATION

- **Lovely Professional University** Phagwara, Punjab
Bachelor of Technology - Computer Science and Engineering: CGPA: 7.29 August 2023 - Present
- **Khalsa Mont. Sr. Sec. School** Bulandshahr, Uttar Pradesh
Intermediate; Percentage: 66.4% April 2022 - March 2023
- **Khalsa Mont. Sr. Sec. School** Bulandshahr, Uttar Pradesh
Matriculation; Percentage: 88% April 2020 - March 2021
