Portfolio: Portfolio_2026

SKILLS

- **Languages**: Shell scripting, Python, C++
- **Web**: HTML and CSS, NodeJS
- **Tools/Platforms**: MySQL, Git, GitHub, Gitlab, Linux, Kubernetes, Docker, Jenkins, Terraform, Grafana, Prometheus, AWS, Ansible
- **Soft Skills**: Problem-Solver, Team work, Leadership, Quick Learner, Adaptability, Time management

INTERNSHIP

Software Engineering Intern | Xebia IT Architects June - July 2026

- Contributed to the enhancement of **Xebia's Learning Management System (LMS)** by implementing UI improvements and modifying existing application components
- Improved user interface and usability by refining LMS elements, navigation, and overall user experience.
- Contributed to the **DevOps** workflow, supporting application development and deployment-related activities.
- Collaborated with team members in an **8-week internship**.

PROJECTS

Mental Health Checkup Simulator - GitHub Mar2026

- Implemented persistent data handling through file I/O techniques to manage 100+ patient records, producing organized mental health reports and improving overall code maintainability.
- Built a terminal-based mental health evaluation application in C++, modeling multiple assessment scenarios with layered symptom analysis and tailored wellness suggestions.
- Designed a structured object-oriented model with multiple interconnected classes handling patient details, questionnaires, and result processing, applying inheritance, encapsulation, and method overloading.

Deployment Rollback - GitHub Jan 2026

- Built a deployment failure simulation system using Node.js that demonstrated version management, automated health checks, and rollback recovery, reducing recovery time from failure by 90% through one-command rollback automation
- Implemented version tracking, monitoring, and incident logging with automated health verification, enabling real-time detection of faulty deployments and recovery to stable builds
- Designed a CI/CD-style deployment workflow simulating v1 (stable) → v2 (faulty) → automatic rollback, documenting full incident post-mortem and deployment history to model production-grade reliability practices

End to End DevOps Pipeline - GitHub Sept 2025

- Engineered an automated CI/CD pipeline using Jenkins and Docker, streamlining multiple build, test, and deployment stages and reducing manual effort by ~25–30%.
- Managed cloud infrastructure and Used Infrastructure-as-Code tools (Terraform/Ansible) across 3 environments (dev/test/prod), enabling reliable deployment of several services with improved scalability.
- Deployed on AWS EC2 using Jenkins , so that our FoodHub can be accessible by anyone using domain or IP.
- Enhanced system reliability by incorporating automated checks, monitoring of key operational metrics via Prometheus/Grafana, and security verifications to support quicker detection of issues.

CERTIFICATES

- Oracle Cloud Infrastructure 2025 Certified AI Foundation Associate – **Oracle University** Dec 2025
- Microsoft Azure Fundamentals - **Microsoft** Jan 2025

Extra-Curricular Activities

- Been part of **Department of Student Organisations, LPU — HR Team Member | 2+ Years:** Coordinated and managed multiple university-level events, handling team coordination, volunteer management, task allocation, and event execution.
- Volunteered with an NGO for one month, supporting community development through plantation drives, human rescue efforts, and Ganga ghat clean-up activities.

EDUCATION

- **Lovely Professional University** Phagwara, Punjab
  Bachelor of Technology - Computer Science and Engineering: ***CGPA: 7.38*** *August 2023 - Present*
- **Khalsa Mont. Sr. Sec. School** Bulandshahr, Uttar Pradesh
  Intermediate; ***Percentage: 66.4%*** *April 2022 - March 2023*
- **Khalsa Mont. Sr. Sec. School** Bulandshahr, Uttar Pradesh
  Matriculation; ***Percentage: 88%*** *April 2020 - March 2021*
